## Product Description

### LC To LC 4 Strand Single Mode 9/125 LSZH Breakout Cable 3.0mm Black

Breakout Cable is a type of fiber optic cable that contains multiple fibers, with multiple branches branching off from the trunk cable at both ends so that they can be individually connected to different devices. This design makes Breakout Cable very suitable for application scenarios that require quick connections and disconnections, such as data centers and telecom rooms. This 4 strand breakout fiber optic cable contains 4 single-mode fibers, each with a core diameter of 9 microns and a cladding diameter of 125 microns, and it is terminated with LC UPC connectors on each branches. It is a fiber optic cable suitable for high bandwidth and long-distance transmission, with good fire resistance and easy connection characteristics, widely used in data centers, communication networks and other fields.

#### Applications

1. Data center cabling
